

To Whom It May Concern:

Alpha Grainger Mfg Inc. is a manufacturer of Screw Machine Products for the automotive, and electronics industries. We have been using Resec Systems for vision inspection application for over 10 years. We use both manual and automated versions for high-speed inspection.

The accuracy and speed of these systems far exceeds any other systems we have encountered. The ease of programming has allowed the quality department to create, edit and erase part programs with ease. These systems are used for 8 to 10 hours a day and have proven to be extremely reliable. These systems have reduced the inspection time of some of our parts by about 70%.

This increase in productivity and the systems accuracy and reliability has made these systems vital to our Quality Department.

Sincerely,

A handwritten signature in black ink that reads "Angel Sanchez". The signature is fluid and cursive, with a long horizontal stroke at the end.

Angel Sanchez
